

## Early Journal Content on JSTOR, Free to Anyone in the World

This article is one of nearly 500,000 scholarly works digitized and made freely available to everyone in the world by JSTOR.

Known as the Early Journal Content, this set of works include research articles, news, letters, and other writings published in more than 200 of the oldest leading academic journals. The works date from the mid-seventeenth to the early twentieth centuries.

We encourage people to read and share the Early Journal Content openly and to tell others that this resource exists. People may post this content online or redistribute in any way for non-commercial purposes.

JSTOR is a digital library of academic journals, books, and primary source objects. JSTOR helps people discover, use, and build upon a wide range of content through a powerful research and teaching platform, and preserves this content for future generations. JSTOR is part of ITHAKA, a not-for-profit organization that also includes Ithaka S+R and Portico. For more information about JSTOR, please contact [support@jstor.org](mailto:support@jstor.org).

Strings, whereof there were about a thousand in one Hair more or fewer; according to the thickness of the Hair. Whether these Strings are hollow, *i.e.* so many Pipes or Vessels, I cannot positively say, but it seemeth to me that they are. So that I conceive we may not unfitly compare the Clods of the Hair (consisting of the aforesaid irregular particles) to the Bark of a Tree; and the little strings which compose all that part of the Hair within the Clods, to the Pipes which make the Wood.

These Strings, or if you please, Pipes, do not lie every where stretched out in a straight line, but in some places are somewhat crooked, as at *F*.

I have also shewed several Gentlemen the Brisles of a Hog; and therein (being cut over thwart with a sharp knife) the said Strings, very distinctly: which likewise seemed to be hollow.

*Extract of a Letter written by Signior Borelli, about the price of his Telescopes: Communicated to Sir Jonas Moore.*

**T**He said worthy person saith, that although he did not at first intend any more than to present his Glasses to some of the most famous Astronomers; yet being earnestly solicited by his Friends from many parts, he offers to rate the price of them, according to what the most known Artists, such as *Campani* and *Divini*, have done, who both have commonly sold their Glasses at the rate of a Pistol (*i.e.* about 17 shillings and six pence) the foot. But if any Glas hath proved extraordinary, they have trebled and quadrupled that price. He saith further, that he had seen one of *Divini's* of 12 foot, which was sold for 400 *Livers* (*i.e.* about 30 *l.* Sterling.) And that *Campani* sold another of 34 feet, for 2000 *Livers* (*i.e.* about 150 *l.* Sterling.) Notwithstanding which, he is willing to part with the best of his own Glasses of 50, 60, or 65 feet for 500 (*French*) *Crowns* (*i.e.* about 112 *l.* and 10 *s.* Sterling) which is less than the price of the forementioned Glasses of 34 feet. And for the small Glasses, he will let them go from 6 to 12 foot, at a (*French*) Crown a foot; from 12 to 17 or 18, at half a Pistol; from 18, to 26, at a Pistol.
